

VaporSpooler

Resistance Wire Respooler

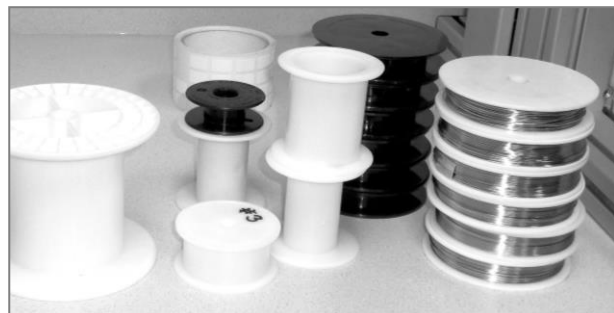

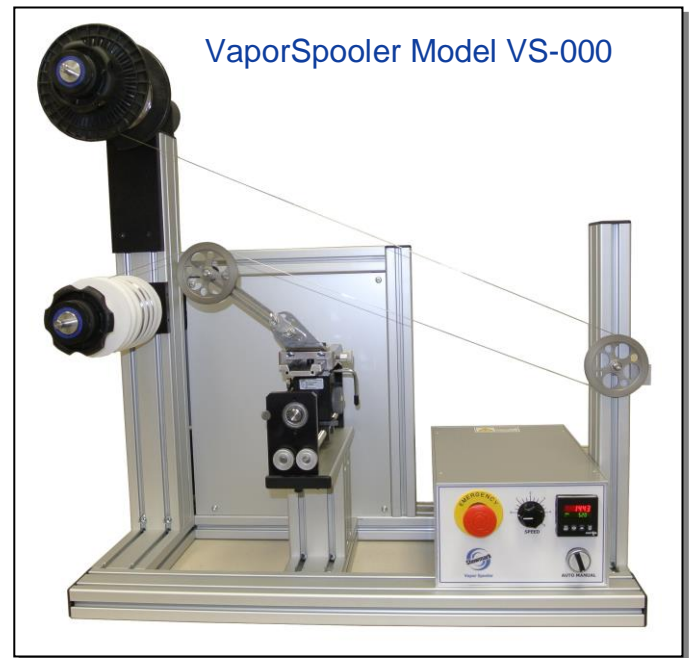

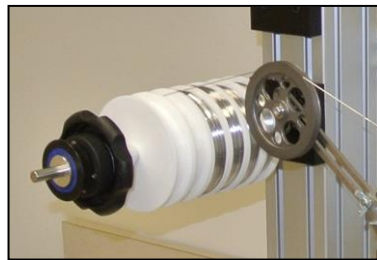

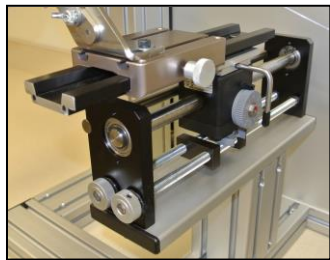

A Flexible Wire Respooler for the Vaping Industry

The Showmark VaporSpooler is ideal for distributors and retailers of Kanthal, Nichrome and other resistance wires for use in vaping or e-cigarette modifications. In some cases, it can also be used with ribbon wire. It makes the job of making neatly wound spools and coils from bulk spools fast, accurate and easy.

The VaporSpooler can be set up very quickly for each combination of wire and spool to be wound onto. Once it is configured, the operator pushes one button to commence spooling. They can walk away as each spool is wound with neat and even tangle free layers. The system automatically stops with length repeatability of .6%

Multi-spool Quick Slide (MQS)

The Multispool Quick Slide attachment allows batches of spools to be wound for faster production.

The VaporSpooler works with a variety of spool types and sizes. It also produces neatly wound coils with the optional coil winding mandrel.

We accept the following...

Universal Hub System

Spools up to 12 inches in diameter and 6 inches wide can be quickly mounted on the supply or take-up shafts using the Universal Hub System. No tools needed.

The spool's center bore diameter can be 12-46mm (.47-1.81 inches)
